更新issue

[Edit issue]() `PUT /rest/api/2/issue/{issueIdOrKey}`

Edits an issue from a JSON representation.

The issue can either be updated by setting explicit the field value(s) or by using an operation to change the field value.

The fields that can be updated, in either the fields parameter or the update parameter, can be determined using the **/rest/api/2/issue/{issueIdOrKey}/editmeta** resource.
If a field is not configured to appear on the edit screen, then it will not be in the editmeta, and a field validation error will occur if it is submitted.

Specifying a "field_id": field_value in the "fields" is a shorthand for a "set" operation in the "update" section.
Field should appear either in "fields" or "update", not in both.

Request

QUERY PARAMETERS

parameter	type	description
`notifyUsers`	*boolean*Default: `true`	send the email with notification that the issue was updated to users that watch it. Admin or project admin permissions are required to disable the notification.

EXAMPLE:

```
1
2   {
3     "update": {
